

How to Update Software Using Autodesk Account

Product updates, hot fixes, security fixes, add-ons, and more are available on the **Product Updates** page in Autodesk Account. The page provides a complete list of all updates, not just those that pertain to your installed software. It is recommended that you review the list and install as necessary throughout the lifecycle of the software.

The following details how to update software using Autodesk Account:

Step 1

Go to manage.autodesk.com and log in.

Step 2

In the navigation panel>Products and Services section, click **All Products and Services**.

Step 3

Locate the required update and click **Download**. Alternatively, you can access software-specific updates on the software product card by clicking **View details**, or using the Autodesk Desktop App.

Step 4

Double-click the .exe from your *Downloads* folder to begin the install.

Step 5

Confirm the app can make changes and click **Install Update**.

Step 6

When complete, click **Finish**.

Tip: You can locate required updates by scrolling the list; however, using the search bar, defining filters, or setting a release date range can significantly help with locating specific updates.
